                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Web: www.genoscope.com.tl)
Determination of this UAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BOCP).
The BOCP is construction a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitlly.org The BOCP Drosophila melanogaster genome using these BACs. For further information melanogaster genome using these BACs for further information and an official see http://www.fruitlly.org The BOCP Drosophila on the latester de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named ROSWell and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BOCP from the isogenic strain y2; on bw Sp, the same strain used for the BOGP's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Submitted (02.JUN-1999) Genoscope - Centre National de Sequencage BP 191 91006 EVRY cedex - FRANCE (E-mail : seqrefégenoscope.cns.fr

An Arabidopsis tuli-length cDNA library was constructed essentially
as reported previously (seki et al., 1998). cDNA cleaved with BamHI
and Khol was liquted to modified Lambda FLC.l vector (Carninci et
al., submitted for publication) digested with BamHI and Sali. This
clone is in a modilied pBiuescript vector. Please visit our web
site (http://www.qsc.riken.go.jp/e/plant/index_e.html) for further
Arabidopsis thallana

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ά
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ŝ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                            The invention relates a nucleic acid which is capable of requiating the transcription of human APP-binding cassette I (ABCI) gene, which is a casual dene for pathologies linked to a dysfunctioning of choicesterol metabolism, including diseases such as atheroscicrosis. Polynucleotides of the invention are used to screen candidate molecules or substances that are capable of modulating the transcription of the ABCI gene. They are used in antisense therapy. Compositions comprising sequences of the invention are used to treat hypercholesterolamia and atheroscierosis. The present sequence is human ABCI transcription revulation in MA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120

                                                            Treating a lower than normal high density lipoprotein-cholesterol (HDL-0) level, a higher than normal triglyceride level, or a cardiovascular disease, by administering a compound that modulates LXR-or RXR-mediated transcriptional activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    53309
                                                                                                                                                                                                                                                                              The present invention relates to a method for treating a patient diagnosed as having a lower than normal high density to lipoprotein-cholesteroi (HID.-C) level, a higher than normal triglyceride level, or a cardiovascular disease, involving administering a compound that modulates LXF or RXF mediated transcriptional activity or ABCI expression or activity. The LXR gene product may be used in an assay to identify compounds useful for the treafment of a disease or condition selected lower than normal HID cholesterol level, a higher than normal triglyceride level, and a cardiovascular disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             240

The invention relates to the human ARC1 cholesterol transporter protein (FBBME2) and to nucleic acid sequences (C69120) Which encode it, ABC1 is a member of the ATP-binding cassette (ABC transporter) superially of proteins, and plays a crucial role in cholesterol mansport particularly cordered in cholesterol trafficking in monocytes and fibriciasts, being involved in cholesterol efflux from the cell. The gene encoding ABC1 is located on chromosome 941, and mutations in this yene are associated with two generic HDD. And density hipoprotein) deticiency disorders, while two generic HDD and familial HDL deliciency (FHA). These diseases of an edistinguishable in that TD is an autosmal remassive disease, while CFHA is inherited as an autosmal dominant trail for everls. The Cquod cholesterolly in the blood correlate with a high risk of caldiovascular disease. particularly coronary artery disease, hut also carebrovascular disease. particularly coronary artery disease, hut also carebrovascular disease. The invention provides quenche most of sease. Compension of HDL has protective effects against cardiovascular disease. The invention provides quenche most networked or cardiovascular disease comprising the administration of an expression of curdiovascular disease comprising the administration of an expression of coronary active fraquent thereof in choosing which mine ABC1 experienced a palator of a palator of a palator of intrinary fraction and methods of general mining for such compounds which mine active transported a palator than an effect internation of an expression and methods of security disease during for such compounds of intrinary disease and methods for determining for such compounds and instead and the compounds of the mineral disease and methods of security disease during for such compounds of the mineral disease comprises of determining for such compounds and formation of disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cerebrowsscular disease, coronary restructs to per plants vascular disease. Coronary restructs to per plants vascular disease. They may also be used in the treatment of diseases associated with AMC1 biological activity, such as Albement's disease. Numemon First disease, Huntington's disease. A linked adrenolouskongstopps and reinter The invention specifically excludes protects with the exact smice acid sequences or GenBank Accession No: CANNOS-1 and X7922., and the numer present sequence as GenBank Accession No: AJ022.96.1. The present sequence represents the human AHC1 gene promoter region (exon 1).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ABC) gene. Human ABC1 proteins and nucleofides can be used to treat or prevent cardiovascular disease, especially corolary aftery disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 ATAACTGATGGCTGTTTCCCCTCCTGCTTTATCTTTCAGTTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTACCCTCTGCTGCTTTTCAGTTAATGATTATCTGTTTCAGTTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAATGATTAA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           stores. ABC1 is defective in Tangier disease, a genetic disorder characterised by abnormal HDL-cholesterol metabolism. The ABC1 gene is localised to chromosome 9q22-9q11. The ABC1 genes and proteins are useful for developing pharmaceutical agents for the treatment of heart disorders associated with hypercholesterolemia and
substrates across the plasma membrane. ABC1 is a pivotal protein in the apolipoprotein mediated mobilisation of intracellular cholesterol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence encodes a human adenosine triphosphate (ATP) binding cassette protein (ABC) 1 polypeptide. ABC1 resides in cell membranes and utilises ATP hydrolysis to transport a wide variety of

The present sequence encodes a human adenosine triphosphate (ATP) binding cassette protein (ABC) I polypeptide. ABCI resides in cell membranes and utilises ATP hydrolysis to transport a wide variety of substrates across the plasma membrane. ABCI is a pivotal protein in the apolipoprotein-mediated mobilisation of intracellular cholesterol stores. ABCI is defective in Tanqer disease, a genetic disorder characterised by abnormal HDL-cholesterol metabolism. The ABCI gene is localised to chromosome 9422-9431. The ABCI genes and proteins are diseaful to developing planmaceutical agents for the treatment of heart disease and other disorders associated with hypercholesterolemia and atherosclerosis. The genes are useful for developing screening assays to screen for compounds that regulate the expression of genes associated with cholesterol transport. The genes and proteins are also useful for are also useful as diagnostic indicators of cardlovascular disease and

                                                                                                                                                                                                                                                                           binding cassette protein (ABC) I polypeptide, and is soluted trom a Tangier disease patient. ABCI resides in cell membranes and utilises a Tangier disease patient. ABCI resides in cell membranes across the plasma membrane. ABCI is a pivotal protein in the apolipoprotein-mediated mobilisation of intracellular cholesterol stores. ABCI is defective in Tangier disease, a genetic disorder characterised by abnormal HDL-cholesterol metabolism. The ABCI gene is localised to chromosome 9922-9931. The ABCI genes and proteins are useful for developing pharmaceutical agents for the treatment of heart disease and other
                                                                                                                                                                                                                                                                                                                                                                                                                                                            disorders associated with hypercholesterolemia and alherosclerosis. The genes are useful for developing screening assays to serven for compounds that regulate the expression of genes associated with cholesterol transport. The genes and proteins are also useful for are also useful as diagnostic indicators of cardiovascular disease and other disorders associated with hypercholesterolemia.

The present sequence encodes a human adenosine triphosphate (APP) binding cassette protein (ABC) | polypeptide, and is isolated from a rangier disease patient. ABCI resides in cell membranes and utilises APP hydrolysis to transport a wide variety of substrates across the plasma membrane. ABCI is a pivotal protein in the apolipoprotein-mediated mobilisation of intracellular cholesterol stores. ABCI is defective in Tangler disease, a genetic disorder characterised by abnormal HDL-cholesterol metabolism. The ABCI gene is localised to chromosome 9922-9931. The ABCI genes and proteins are useful for developing pharmaceutical agents for the treatment of heart disease and other disorders associated with hypercholesterolemia and atherosclerosis. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                genes are useful for developing screening assays to screen for compounds that regulate the expression of genes associated With choicsterol transport. The genes and proteins are also useful for are also useful as diagnostic indicators of cardiovascular disease and other disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Adenosine triphosphate (ATP) binding cassette (ABC) polynuciectide, useful for the development of agents for the treatment of heart disease and other disorders associated with hypercholesterolemia and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               346
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 97 CAGTTAATGACCASCCAGGGGGGTGCCTGCTGTCAGCTGTGGCCGCTGCCTTCCAGGGCT 156

                                                                                                                                                                                                                                                                6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence encodes a human ademostre triphosphate (ATP) binding cassette protein (ABC) I polypeptide, and is isolated from a fanger disease patient. ABCI resides in cell memorance and utilises. ATP hydrolysis to transport a wide variety of substrates across the plasma membrane. ABCI is a pivotal protein in the apolypeprofesurables plasma membrane. ABCI is a pivotal protein in the apolypeprofesurable mobilisation of intracellular cholesterol stores. AbCI is directive in Tanglet disease, a genetic disorder characterised by abnormal HBL-cholesterol metabolism. The ABCI gene is localised to directive in Tanglet disease and proteins are useful for developing splanmaceutical angents for the treatment of heart disease and other displandations are useful for developing screening assays to streat for compounds that regulate the expression of genes associated with hypercholesterolemia and attended to the expression of genes associated with independent and a the protein and a prot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ademosine triphosphate (AIP) binding cassette protein (ABC) i polynomicotides and polypeptides, useful for treatment of heart disease and other disorders associated with hypercholesterclemia and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ansport. The genes and proteins are also useful diagnostic indicators of cardiovascular disease and other disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                44.5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            276

The present sequence encodes a human adenosine triphosphate (ATP) binding cassette protein (ABC) I polypeptide, and is isolated from a Tangier disease patient. ABC1 resides in cell membranes and utilises ATP hydrolysis to transport a wide variety of substrates across the plasma membrane. ABC1 is a pivotal protein in the apolipoprotein-mediated mobilisation of intracellular cholesterol stores. ABC1 is defective in Tangier disease, a genetic disorder characterised by abnormal HDL-Cholesterol metabolism. The ABC1 gene is localised to chromosome 9q22-9q31. The ABC1 denes and proteins are useful for developing pharmaceutical agents for the treatment of heart disease and other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     disorders associated with hypercholesterolemia and atherosclerosis. The genes are useful for developing screening assays to screen for compounds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Adenosine triphosphare (ATP) binding cassette protein (ABC) 1 polynucleotides and polypeptides, useful for treatment of heart disease and other disorders associated with hypercholesterolemia and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    that regulate the expression of genes associated with cholesterol transport. The genes and proteins are also useful for are also useful as diagnostic indicators of cardiovascular disease and other disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleotide sequence of ABC: polypeptide from Tangier disease patient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         apolipoprotein-mediated mobilisation; cholesterol; Tangier disease; chromosome 9422-9431; heart disease; hypercholesterolem:a; atherosclerosis; cholesterol transport; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; adenosine triphosphate binding cassette protein 1; ABC1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 10474 BP: 2967 A: 2304 C: 2415 G: 2844 T; 4 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates a nucleic acid which is capable of required the transcription of human APP-binding cassette | (APC) area, which is a casual gene for pathologies linded to a dystmetricalism, considered metabolism, including diseases such as atherosciences, form clearings of the invention are used to screen candidate molecules or sustainers that are capable of modulating the transcription of the AET general They are used in antisense therapy. Compositions compiles no sequences of the invention are used to treat hypercholesterolaemia and abscriberosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /product "Protein encodes by haman assistance extra is"

The nucleic acid sequence, primers and probes derived from the ABC1 sequence, and polypeptides and vectors are useful for the prevention of atherosclerosis, in a subject affected by a dysfunction in the reverse transport of chousterfol. The polypeptide encoded by the ABC1 gane is useful for screening term and active ingredient for the prevention or troatment of a discuss resulting from dysfunction in the reverse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Roster-Montus M, Arnould-Requigne I, Prades C. nuclectide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of detecting the nuclectides or polypeptides in a sample, and methods of detecting the nuclectides or polypeptides in a sample, and methods of indentifying compounds which bind to polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may have various activities, including cytokine, cell proliferation or cell afferentiation activities; stem cell growth factor activity; haematopolesis requiatory activity; tissue growth activity; immuncomodulatory activity; or inhibin related activities;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  that can be used to augment or replace cells damaged by illness, autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug screening techniques. The present sequence represents a cDNA encoding a novel human polypeptide of the invention.
                                                                                                                                                                                              Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABBA08225-ABB09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     chemotactic or chemokinetic activities; haemostatic, thrombotic or thrombotic or thrombotic or thrombotic or may be involved in oncogenesis, cancer cell proliferation or metastasis. Depending on their biological activities, polypeptides and nucleotides of the invention are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or qene therapy. Such conditions include cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell disorders), chronic inflammatory conditions (e.g., astuma or arthritis), proliferalive reticopathy, atherosclerosis, coronary heart disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              healing (e.g., of burns, incisions and ulcers), while those with immunomodulatory activities may be used in the treatment of viral, bacterial and fungal infections in addition to immune disorders. Polypeptides with growth factor activity may be used in cell cultures to promote cell growth. For example, such polypeptides may be used to manipulate stem cells in culture to give rise to neuroepithelial cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               arterial ischaemia, bone disorders (e.g., osteoporosis), and abnormal vascular growth. Polypeptides involved with tissue regeneration and repair (or nucleic acids encoding them) may be used to promote wound                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to polynucleotides (AAK51455 AAK5445) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to eytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in Other cell populations. Be polynucleotides and polypeptides are useful in gene therapy, accines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, hammingholism spreaming and activity, tissue growth factor activity, immunemodiaticy activity and activity and may be useful in the diamness and/or treatment of cancer, leukaemia, nervous system disorders, atthritis and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to four common polymorphisms in the gene encoding ATP-binding describe transporter 1 (ARCI). ARCI is associated with decreased Apod-3 mediated efflux of cholesterol. The polymorphisms in ABCI directly affects cellular lipid homeostasis, which is a key factor in the atherogenetic processes. The ABCI polymorphisms are useful for diagnosing and treating lipid disorders, cardiovascular diseases (coronary heart disease, atherosclerosis) and inflammatory diseases (psortasis, lupus crythematosus). The Identification of ABCI as a transporter for interleukin-libeta (IL-libeta) identifies this gene as a candidate for treatment of inflammatory diseases including rheumatoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                216

The sequence includes an extended open reading frame (ORF) to that provided by the sequence in AA17014, using an alternative ATG codon as initiation codon and thereby adding an alternative ATG codon as initiation codon and thereby adding an AAM5028). The invention provides 4 common polymorphisms in the ABC1 gene. Those were identified by sequenting the ABC1 acce to different Tangler kindreds. In the variant quies (connecting as in different Tangler kindreds. In the variant quies (connecting as in position 136, dischanged to G at position 136, as changed to C at position 136, or any combination of these. All or these
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /note- "alternative open reading trame of AAI70314"

polymorphisms alter the amino acid sequence of ABC1 and therefore may affect its function. The 2 most common polymorphisms (G596A) and A2589G) are both associated with a decreased in vitro AppA-1 mediated efflux of cholesterol from mononuclear phagocytes, a feature typical of Tangier disease. 3 of the variants (G596A, A2589G and G3456C) are significantly increased in a population of men having low high density lipoprotein-cholesterol levels and established coronary heart disease (CHD) relative to CHD-free control subjects. The use of the provided ABC1 polymorphisms for the diagnosis and treatment of lipid disorders, cardiovascular chiseases, and inflammatory diseases (e.g. psoriasis, lupus erythematodes) is claimed. Modulation of ABC1 transcripts or proteins by antisense or ribozyme technology or RNA decoys is also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  97 CAGTIAATGACCAGCCACGGGGGTCCCTGCTGTCAGCTCTGGCCGCTGCCTTCCAGGGCT 156

On Jun B. 2001 this sequence version replaced di:14272250.

During sequence assembly data is compared from overlapping clone name white that the variation amountation may not be found in the sequence submission or corresponding to the overlapping clone, as we submit sequences with only a small overlapping clone, as we submit sequences with sonly a small overlapping clone, as we submit sequences with sonly a small overlapping clone, as we submit sequences with an alternate chemistry or covered by high quality data (i.e., phich quality >> 30); an altempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one MI3 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em. FMHLS. Switcher assembly was confirmed by restriction digest. The following a database can be found at at.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       --
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ALISTAGS 129608 bp DNA linear ERIGILIUN-2001
